History

Profile

Freeware

Products

Shrinkware

Languages: Assembler 390, Cobol, PLI, REXX (no language but...LE/370)

Operating systems: VSE/ESA down to the bit

MVS (z/OS) good applicationprogrammer

Subsystems: CICS/TS (2.2/2.3 to TS 3.2)

Activities (as of Feb 2008):

- Performance-analysis (does this application fit onto the current load?),
- Programarchaeology (can we use the knowledge burried in legacy programs?),
- LE-Conversion (is R13 realy unused and R2 nowhere used as base?),
- Exit-programming in CICS (who is allowed to issue SPOOLOPEN?), REXX, POWER and LE.
See also under FREEWARE,
- EXCI counterpart to "call" batch-routines from CICS,
- DEBUGer based on TRAP/RP instructions instead of interrupt driven techniques,
- Various routines based on TCP(sockets), MQ and ENTIRE-X to feed net-applications
with mainframe-data,
- XML documents into MQ-S and vice versa
- conversion of COMMAREA based CICS-Programs to CONTAINER and SOAP-services
- HLASM course-developement for new possibilities on z-Series
- Conversion from a microfiche based archive to a CICS/TS solution with PDFs
- various courses around CICS/TS and the web
